PLEASE READ BEFORE ORDERING

Remittance in full should accompany orders. We guarantee safe arrival of seeds or plants within the 50 states, but since we have no control over purchaser's knowledge or skill, nor over climate or weather, we do not accept responsibility for results dependent upon these factors. In no case shall we be liable for more than the amount actually paid. PEARCE SEED COMPANY, Moorestown, New Jersey. (Pearce Seeds and Plants)

ABOUT SEED ORDERS—Seeds are sent postpaid by regular mail. Minimum seed order should total *three dollars*. Note that average height of species is given in each listing; also key letters that tell how and when to sow. Thus (x) means to sow when soil is warm in spring or summer, (k) to sow in spring while soil is still cool, (kt) to sow outside in late fall or early spring, (yt) to sow in fall or winter in full exposure to cold, or otherwise outside in earliest spring, (w) to sow in window, glass-covered frame, or greenhouse.

ABOUT PLANT ORDERS—Minimum acceptable order for plants (or bulbs), at prices here, is *six dollars*, but smaller orders will be filled if accompanied by a sixty cent service fee. All plant prices are FOB Moorestown, shipment by railway express, collect for shipping charges. If wanted instead by parcels post, then add to remittance for postage and mail packing, 10% for U.S. points east of the Mississippi, and 15% if west.

FIVE UNUSUAL AMERICAN WIDLINGS

Five highly desirable, though rather rare, American beauties. All are quite practicable from seed, if the directions we will send, be intelligently followed. All are winter-hardy.

THE PLANTS OF WILD FLOWERS

There is nothing particularly difficult or different in the growing of wild flowers, for, of course, all flowering plant species are wild flowers somewhere on the earth. Wild flowers are simply the kinds that happen to be the native or spontaneous, flowering plants of any particular area. That means there is no one uniform rule to be followed in cultivating them, any more than one would grow alike say Petunias (wild in South America); Marigolds (wild flowers of Mexico), Coleus (wild in Java), Gerbera (wild in South Africa), and Chrysanthemum (wild in Japan). It means, too, that they are neither harder nor easier for you to grow than are these other plants that happen to have been more usual in gardens. Kinds offered below are all native to, or widely wild, in the United States, or in Canadian provinces or Mexican states immediately contiguous to the United States.
